

## FAQ

### Permanent Make-up Questions & Answers!

#### **Q.1 Will the treatment help my appearance?**

If you have over plucked your eyebrows to the extent that the hair growth is patchy or non-existent, or if your lips are an irregular shape or scarred from sun damage, your appearance can most definitely be improved! If your eyes are very pale or small, the shape can be defined and enhanced permanently.

#### **Q.2 Is the process safe and is it painful?**

I have the highest level of Autoclave Sterilization. The process is very safe. When colour is pressed into the skin any discomfort is minimized with the application of a topical anaesthetic cream prior to treatment.

#### **Q.3 Can I go back to work after the treatment?**

Most clients will experience some degree of puffiness after the treatment. This will disappear within a short time, usually 20 to 24 hours. Lips will take the longest. The anaesthetics I use are very good that there is very little swelling. Don't need to go to a dentist for a lip block for lips.

#### **Q.4 How long will it last and can I see someone who has had it done?**

Four to Seven years depending on the amount of colour used. I have had the treatment done and will be on site or come to the comfort of your home for a viewing if you require. Further, I have undergone vigorous training methods in order to keep abreast of developments within the industry in addition to my original training.
